Inflatable Decoys

Inflatable decoys are frequently used by various modern armies for training purposes and as combat decoys as a battlefield strategy and deception of enemy.

An excellent Decoy would look exactly the same like the original vessel, in terms of size, shape, color and also its radar and thermal signature on the screens.

Magam Safety manufactures decoys at the highest standards, taking into consideration not only shape and size, but also characteristics such as multi-spectral signature and metal components that are picked up by radar, satellite and other technologies.

Magam's decoys folds into a small size, which allows smooth transportation for many units, and contributes to lower the operation and maintenance expenses.

Magam's R&D department has the capability to manufacture decoys to any customer's requirements.

Magam's precise manufacturing and top quality control, enables accurate simulations and much lower training costs to military organizations. Further more, to be ready for any war scenario to come.
